

Changelog

Public releases are all root nodes.

Incremental version bumps that were not released publicly are nested where appropriate.

P.S. If there is a standard (popular) changelog format, please let me know.

- **0.2.13 : 2012.03.24**

- **Features**

- 0.2.13 : @mjpieters Updates pages_list helper to only show pages having a title.
 - 0.2.12 : @sway recommends showing page tagline only if tagline is set.
 - 0.2.11 : @LukasKnuth adds 'description' meta-data field to post/page scaffold.

- **Bug Fixes**

- 0.2.10 : @koriroyes fixes typo in atom feed

- **0.2.9 : 2012.03.01**

- **Bug Fixes**

- 0.2.9 : @alishutic Fixes the error on post creation if date was not specified.

 - 0.2.1 : Resolve incorrect HOME_PATH/BASE_PATH settings

- **0.2.0 : 2012.02.01**

- **Features**

- Add Theme Packages v0.1.0 All themes should be tracked and maintained outside of JB core. Themes get "installed" via the Theme Installer. Theme Packages versioning is done separately from JB core with the main intent being to make sure theme versions are compatible with the given installer.
 - 0.1.2 : @jamesFleeting adds facebook comments support
 - 0.1.1 : @SegFaultAX adds tagline as site-wide configuration

- **0.1.0 : 2012.01.24**

- First major versioned release.

- **Features**

- Standardize Public API
 - Use name-spacing and modulation where possible.
 - Ability to override public methods with custom code.
 - Publish the theme API.
 - Ship with comments, analytics integration.

- **0.0.1 : 2011.12.30**

- First public release, lots of updates => Thank you everybody for dealing with the fast changes and helping me work out the API to a manageable state.
